

Nirnay निर्णय “decision”

Most student tickets can be answered in seconds. The hard part is spotting the few that must go to a person.

Email · Hindi

नमस्ते, मेरा बैच दिख नहीं रहा है जो मैंने अभी 10 मिनट पहले खरीदा। क्या करूं?

Answer automatically

Bought 10 minutes ago

WhatsApp · Hinglish

sir maine kal Arjuna JEE 2027 batch kharida, paise kat gaye but app me batch nahi dikh raha. 1 din ho gaya. order id PW8823119

Needs a person

Same batch, but paid a day ago

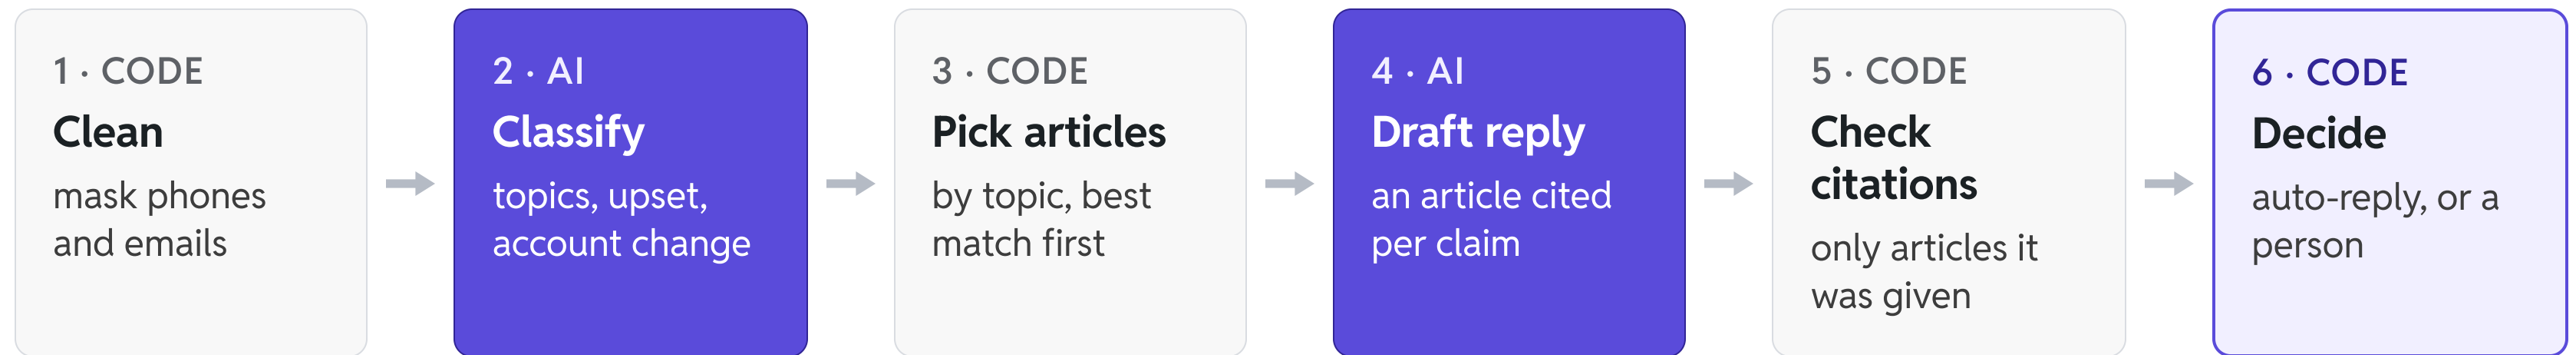

WhatsApp · Hinglish

YE APP HAR BAAR CRASH HOTA HAI!!! paisa leke bhi kuch kaam nahi karta. worst

Urgent: a person first

Fixable, but the student is angry

Two of seven steps use AI; plain code decides

Step 7, also code: pulls out order IDs and UTRs for the agent, and turns citations into PW links for the student.

A person gets it if any one holds

- The student is upset or at risk (marked urgent)
- It needs a change to their account or payment
- The help articles don't cover it
- Confidence is below the threshold (0.80)
- A citation fails the check, or the AI call fails
- The student already wrote this week

Measured on 100 held-out tickets

Model	Routing	Per ticket	p95
Opus 5.5 (default)	96%	\$0.033	15s
Haiku 4.5	93%	\$0.006	8s
Sonnet 5.5	92%	\$0.016	9s
Keywords, no AI	78%	\$0	—

96% on held-out tickets, 73% on blind ones

Routing, 100 held-out tickets

96%

Keywords alone: 78%

Routing, 15 blind tickets

73%

Written without seeing the prompts

Missed escalations, of 100

2

Keywords alone: 15

Upset students caught

10/10

Keywords alone: 6/10

Why the gap

Mostly what counts as “upset”. The labelling guide means anger, threats or distress; the blind set also counts urgency and pleading.

Reply quality

A second model checked 100 drafts against their sources: 93% of claims supported, 1.5% not. It graded more strictly than I did by hand.

Tested in real use

A phone and a laptop on the live site found 4 bugs the existing tests missed, like one ticket answered twice. Each is fixed and has a test.

What breaks, and what I'd do next

Known limits

- Synthetic tickets from one author: real PW tickets are the true test
- 18 of 81 help articles are assumed procedures, and 76% of drafts cite one
- Confidence is self-reported, not calibrated
- Known miss: a request to pause a PW Skills course gets an automatic reply

With more time

1. Test on anonymised PW tickets; re-score monthly with agent corrections
2. Agree what “upset” means with support leads; fix the known misses
3. Haiku first, Opus only when Haiku is unsure
4. Replace assumed articles with PW's internal procedures
5. WhatsApp and email integration, agent login, SLA timers
